

example (a) $\frac{28}{0.5} \xrightarrow{\times 2} \frac{56}{1} = 56$ because $\frac{56}{1}$ means $56 \div 1 = 56$

example (b) $\frac{28}{0.5} \xrightarrow{\times 10} \frac{280}{5} \xrightarrow{\div 5} \frac{56}{1} = 56$

1. Complete calculation (a) or (b) or both.

(a) $\frac{17}{0.5} \xrightarrow{\times 2} \frac{\quad}{\quad} = \quad$

(b) $\frac{17}{0.5} \xrightarrow{\times 10} \frac{\quad}{5} \xrightarrow{\div 5} \frac{\quad}{1} = \quad$

(c) Which method (a) or (b) is easiest?

2. Work out the value of $\frac{26}{0.5}$

2.

dec. \times/\div (14) 1(a) 34 1(b) 34 1(c) I think (a) is easier 2) 52 3) 36 4) 28 5) 18 6) 48

example (a) $\frac{28}{0.5} \xrightarrow{\times 2} \frac{56}{1} = 56$ because $\frac{56}{1}$ means $56 \div 1 = 56$

example (b) $\frac{28}{0.5} \xrightarrow{\times 10} \frac{280}{5} \xrightarrow{\div 5} \frac{56}{1} = 56$

1. Complete calculation (a) or (b) or both.

(a) $\frac{17}{0.5} \xrightarrow{\times 2} \frac{\quad}{\quad} = \quad$

(b) $\frac{17}{0.5} \xrightarrow{\times 10} \frac{\quad}{5} \xrightarrow{\div 5} \frac{\quad}{1} = \quad$

(c) Which method (a) or (b) is easiest?

2. Work out the value of $\frac{26}{0.5}$

2.

3. Work out the value of $\frac{18}{0.5}$

3.

4. Work out the value of $\frac{14}{0.5}$

4.

5. Work out the value of $\frac{9}{0.5}$

5.

6. Work out the value of $\frac{24}{0.5}$

6.

3. Work out the value of $\frac{18}{0.5}$

3.

4. Work out the value of $\frac{14}{0.5}$

4.

5. Work out the value of $\frac{9}{0.5}$

5.

6. Work out the value of $\frac{24}{0.5}$

6.
