

example (a) $\frac{28}{0.5} \xrightarrow{\times 2} \frac{56}{1} = 56$ because $\frac{56}{1}$ means $56 \div 1 = 56$

example (b) $\frac{28}{0.5} \xrightarrow{\times 10} \frac{280}{5} \xrightarrow{\div 5} \frac{56}{1} = 56$

1. Complete calculation (a) or (b) or both.

(a) $\frac{17}{0.5} \xrightarrow{\times 2} \frac{\quad}{\quad} =$

(b) $\frac{17}{0.5} \xrightarrow{\times 10} \frac{\quad}{5} \xrightarrow{\div 5} \frac{\quad}{1} =$

(c) Which method (a) or (b) is easiest?

2. Work out the value of $\frac{26}{0.5}$
