

1. Use this number line to complete $\frac{1}{2} - \frac{1}{6} = \frac{\quad}{6} - \frac{\quad}{6} = \frac{\quad}{6} = \text{---}$ (in simplest form)

2. Use this number line to complete $\frac{1}{5} + \frac{3}{10} = \frac{\quad}{10} + \frac{\quad}{10} = \frac{\quad}{10} = \text{---}$ (in simplest form)

3. Use this number line to complete $\frac{1}{4} + \frac{7}{12} = \frac{\quad}{12} + \frac{\quad}{12} = \frac{\quad}{12} = \text{---}$ (in simplest form)

4. Use this number line to complete $\frac{3}{4} - \frac{1}{12} = \frac{\quad}{12} - \frac{\quad}{12} = \frac{\quad}{12} = \text{---}$ (in simplest form)

Answers

1. $\frac{3}{6} - \frac{1}{6} = \frac{2}{6} = \frac{1}{3}$

2. $\frac{2}{10} + \frac{3}{10} = \frac{5}{10} = \frac{1}{2}$

3. $\frac{3}{12} + \frac{7}{12} = \frac{10}{12} = \frac{5}{6}$

4. $\frac{9}{12} - \frac{1}{12} = \frac{8}{12} = \frac{2}{3}$
