

1. Complete

FYI You may use: alternate, corresponding or vertically opposite to complete the reasons

angle $a = \dots^\circ$ because are equal

angle $b = \dots^\circ$ because are equal

angle $c = \dots^\circ$ because are equal

2. Complete

FYI You may use: alternate, corresponding or vertically opposite to complete the reasons

angle $a = \dots^\circ$ because are equal

angle $b = \dots^\circ$ because are equal

angle $c = \dots^\circ$ because are equal

3. Complete

FYI You may use: alternate, corresponding or vertically opposite to complete the reasons

angle $a = \dots^\circ$ because are equal

angle $b = \dots^\circ$ because are equal

angle $c = \dots^\circ$ because are equal

4. (i) Complete

FYI You may use: alternate, corresponding or vertically opposite to complete the reasons

angle $a = \dots^\circ$ because are equal

angle $b = \dots^\circ$ because are equal

(ii) One angle reason is missing. Why?

.....

Answers

1. a = 45 + alternate
b = 41 + vertically opposite
c = 50 + corresponding
2. a = 140 + corresponding
b = 134 + alternate
c = 141 + vertically opposite
3. a = 122 + vertically opposite
b = 117 + alternate
c = 125 + corresponding
4. a = 137 + corresponding
b = 129 + vertically opposite
(ii) alternate angles are found above the lower parallel line but below the upper, the angle 132° shown, can't have an alternate angle.
