1. (a) There are some blue counters, some green counters and some red counters in a bag.
        The maths teacher says: "The ratio of the number blue counters to the number of green counters to the number of red counters is $2 : 3 : 4$ "
        What fraction of the counters are green?

        (a) . . . .

    (b) In an cinema there are only premium seats and standard seats.
        The ratio of the number of premium seats to the number of standard seats is $1 : 4$
        What fraction of the seats are premium seats?

        (b) . . . .

Answers

a) $\dfrac{3}{9}$ or $\dfrac{1}{3}$ b) $\dfrac{1}{5}$
